

Right Plan. Right Products.
Right Partner.

Mosaic Technology

We identify the best technologies
to fit your goals and budget.

We deliver unique and creative technical solutions for your business that align your IT solutions to your business objectives.

MOSAIC HAS OVER 15 YEARS OF EXPERIENCE PROVIDING CUSTOMERS WITH BEST-IN-CLASS TECHNOLOGY SOLUTIONS FOR ORGANIZATIONS ACROSS THE GLOBE.

OUR SERVICES.

Mosaic Technology can help you make the right technology choice for your business. From network design to implementation and support, Mosaic has the partnerships and experience you need for ongoing success. Our vision for the data center is fast, secure, and scalable linked with a cost and operationally efficient model. To get there, companies need the right plan, the right products, and the right partner. Mosaic provides all three.

DISCOVERY SESSIONS

Understanding your requirements, challenges, and technology goals is the foundation of our customer focused approach. Our sales and technical staff work with you through a collaborative process that begins with an assessment by one of our sales engineers. We get to know your environment and work with you to articulate and define your objectives.

BEST-IN-CLASS PARTNERS

Mosaic is a certified business partner with Dell, HP, Microsoft, VMware, Intel, f5, Nimble Storage, Hitachi, Symantec, EMC, Akorri, Liquidwarelabs, Aruba Networks, Wyse, SilverPeak and others. These are just some of the leading providers of IT infrastructure solutions that Mosaic partners with to support our customer driven approach that is centered around companies meeting their IT needs.

CONTINUED SERVICE AND SUPPORT

Mosaic can help you architect a solution that is unique to your specifications. Our team of industry experts will give you unsurpassed flexibility in choosing and configuring a system. You define your requirements and objectives. We design a best-in-class solution, integrate the different vendor equipment, test it and install it. You save both time and money.

We also provide complete maintenance programs for our used products and for your entire datacenter. You can select any level of maintenance up to, and including, 24 hours a day, 7 days a week, and 365 days a year.

OUR CUSTOMERS

"Massachusetts College of Pharmacy and Health Sciences is committed to the most progressive standards in teaching and learning. That approach also applies to technology."

Tom Scanlon, Chief Information Officer, Massachusetts College of Pharmacy and Health Sciences.

"Mosaic provided me with the resources and knowledge I needed to make good network architecture decisions. They were also available throughout the process to help us overcome roadblocks and minimize delays."

Pete Koehler, Director of IT, Tecplot

VIRTUALIZATION

Virtualization technology is driving a data center revolution. By consolidating hardware and software at the server, storage, and desktop levels, companies can “do more with less” while reducing costs, energy consumption, and facility usage. With virtualization, systems can be quickly configured to optimize CPU usage and adapt to fast-changing workloads. Applications can be installed, upgraded, and maintained centrally. And virtualization makes true disaster recovery an achievable reality for most companies.

DATA MANAGEMENT

The scale of today’s data, the value of data to the enterprise, and a wave of legal mandates highlight the strategic importance of sound data management. Today, you need fast access to more data for longer and longer periods. Mosaic offers a wide range of proven data management solutions.

EMAIL MANAGEMENT

Email is one of the most important databases in your organization. Users demand greater storage allotments every day. And pressure is increasing from regulatory compliance and legal protection requirements. New questions arise every day:

- How do you manage email storage growth without limiting email service levels?
- How long should you keep your data?
- How can you control access to backups and archives?
- How can you effectively ensure that email is always available?

REVOLUTIONIZE YOUR DATA CENTER WITH COMPLETE, PROVEN SOLUTIONS FROM MOSAIC DESIGNED TO MEET YOUR BUSINESS, TECHNOLOGY, AND BUDGET REQUIREMENTS.

VIRTUALIZATION

Revolutionize your data center with complete, proven virtualization solutions from Mosaic designed to meet your business, technology, and budget requirements.

SERVER VIRTUALIZATION

Server virtualization can reduce hardware and operating costs by as much as 50%, with significant savings in administration, power, cooling, and data center infrastructure.

RECOVERY MANAGEMENT

When you virtualize your datacenter, a disaster recovery plan becomes much more attainable, with testing and process documentation that puts a “run book” at your fingertips.

DESKTOP VIRTUALIZATION

Virtual desktops substantially reduce management and administration. Applications can be quickly added, upgraded, and deleted. Security is centralized and data is easier to back up.

EMAIL MANAGEMENT

Your choice of email solution depends on a variety of factors such as available staff, immediacy of a specific problem, and budget. Mosaic offers a range of proven, cost-effective email management solutions.

EMAIL ARCHIVING

An email archiving system works with your email server to help you manage larger and larger amounts of company email. Email archiving captures and preserves all email while still providing end user access. It lets you search thousands of email records in seconds by using search tools embedded in the archiving system.

EXCHANGE DISASTER RECOVERY

At some point Exchange administrators will face a disaster and need to restore an Exchange Information Store (Exchange database). This can take hours or days, depending on the legacy backup system. A solution from Mosaic can significantly reduce recovery time.

EMAIL DISCOVERY

With a Mosaic solution, auditors, paralegals, counsel, and compliance officers can quickly search through thousands of emails, review and export results for court-ready production.

Upgrade. Improve. Advance. Refine.

DATA MANAGEMENT

BACKUP AND ARCHIVING

Backups are central to data management. You need to guarantee you can recover data when it’s deleted, destroyed, or disappears. And archiving has taken on new urgency as regulations like HIPAA, Sarbanes-Oxley and FRCP continue to change the rules for long-term data storage.

DATA DEDUPLICATION

Data deduplication reduces storage space in a backup/archiving environment. A powerful data management tool, it eliminates redundant data and ensures only one unique instance of the data is actually retained on storage media, such as disk or tape.

STORAGE CONSOLIDATION

Storage virtualization is the pooling of physical storage from multiple network storage devices. Virtual Storage is commonly used in a storage area network (SAN) and appears as a single storage device that can be managed from a central console.

STORAGE MANAGEMENT

Storage is more than physical disks. It now includes software and management tools that add substantial value and differentiation. And it continues to evolve. What solution works best for you depends on a variety of factors.
